Introduction

The report addon offers an easy way to generate reports based on Soffid data model.

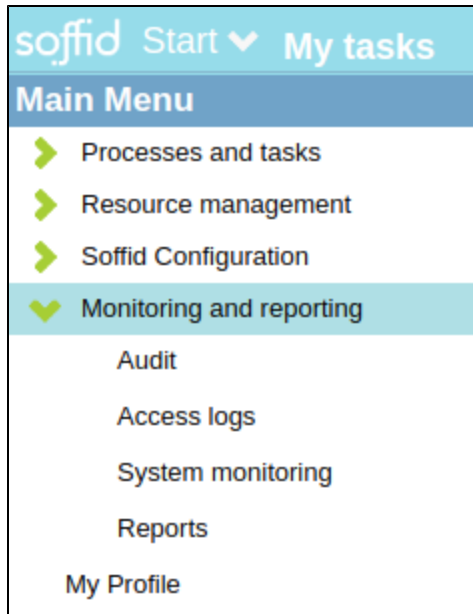

In order to manage reports, three authorization levels are allowed:

- Permission to access report screen: allows the user to executed the explicitly granted reports
- Permission to schedule reports: allows the user to schedule the execution and delivery of periodic reports.
- Permission to admin reports: allows the user to upload or remove reports.

Installation

By installing the **Reporting** addon, which can be downloaded from this [link](#), reports based on the Soffid data model can be obtained easily. Follow this [4. Addons#4.Addons-Installation](#) to know how to install it.

Once installed, option "Reports" will appear in the monitoring and reporting section, as shown below:

Reports

To define a new report, you must:

1. Download reporting addon from <http://www.soffid.com/download/>
2. Upload to console through the Addon Management menu.
3. Restart console.
4. Log off and log in again.
5. Open reports addon screen (*Start Monitoring and reporting Reports*).
6. Download iReport classes from Soffid.
7. Open it and customize hiberante.cfg.xml to point to your development database.
8. Download iReport designer from [sourceforge](#).
9. Execute iReport.
10. Add iReport addon jar, previously downloaded on step 6.
11. Design your report, using the hibernate connector. The data model documentation, including E-R diagrams is [here](#).
12. Upload your report to Soffid
13. Execute or schedule it !!!
