

LOPD

This add-on eases the management of data files affected by the Spanish Data Protection Law 15/99.

This add-on includes into console a new menu entry 'Files with personal data' that allows users to organize all information about files with protected contents. The entry can be found at 'Resource management /Information Systems'.

It is necessary to define a user who is responsible about the data contents in this file and a technical responsible as well.

The screenshot shows a web application interface for managing data files. The main window is titled 'Details' and has four tabs: 'General Information', 'Responsible', 'Data A.P.D.', and 'Comments'. The 'General Information' tab is selected and contains the following fields:

- Name: PersonalFile
- Organization unit: [empty]
- Level: ALTO
- Responsible: user1
- Purpose: [empty]
- Syst. Information: [empty]

Below the form is a navigation bar with the following tabs: 'Identifying data', 'Personal', 'Details of social circumstances', 'Academic and professional data', 'Employment data', 'Commercial data', 'Financial Data', 'Transaction data', and 'Data breaches'. The 'Identifying data' tab is currently selected.
